# Hologlyph Bots

Bonus Configuration

The Elephant (Image Mode)

This image can be made using 24 strokes/open contours which corresponds to 24 lists of points. Objective is to draw as many or all of the strokes as possible.

We have provided a python file that takes the above 500x500 image and generates the list of points for you. The interface allows the team to manually view all 24 contours and generate three lists in *any order* preferred by the team to allocate the contours to the three bots.

Important: Do Not change the parameters in the python file provided.

A video is put up on the discussion forum to explain how to use the python file provided.
